## FOREWORD

According to the French National Agency for Medicines and Health Products Safety (ANSM), Over-the-counter (OTC) drugs are medicines that are accessible to patients in pharmacies, based on criteria set to safeguard patients' safety.

Due to their therapeutic class, these medicines could be dispensed without physician's intervention for diagnostic, treatment initiation or maintenance purposes. Moreover, their dosage, treatment period and Package Insert Leaflet should be suitable for OTC classification. The packaging size should be in accordance with the dosage and treatment period.

According to Article 43 of the Law No.367 issued in 1994 related to the pharmacy practice, and the amendment of Articles 46 and 47 by Law No.91 issued in 2010, pharmacists do not have the right to dispense any medicine that is not requested by a unified prescription, unless the medicine is mentioned in a list which is established by pharmacists and physicians' syndicates. In this regard, the Ministry of Public Health (MoPH) developed the National OTC Medicines List, and presented it in a scientific, objective, reliable, and accessible listing.

The OTC List was developed by a team of pharmacists and physicians from the Ministry of Public Health (MoPH). In order to ensure a safe and effective self-medication at the pharmacy level, several pharmaceutical categories (e.g. cardiovascular medicines) and forms (e.g. injectable) were discarded at first sight. The list covers medicines that are intended to relieve patients from minor to moderate symptoms for a determined period, and procured with the pharmacist's assistance without the physician intervention. These symptoms could involve: moderate muscular pain, non infectious fever, cold, sore throat, labial herpes, gastric acidity and minor symptoms.

In developing the OTC Medicines List, reference was made to the French OTC Drug List (2014), and to the Lebanese National Drug Index (LNDI-2015) which is the reference Guide for medicines in Lebanon.

The National OTC Medicines List covers medicines, dosage forms, package sizes, drug strengths and other information registered at the MoPH. It is divided into

sections based on the Anatomical Therapeutic Chemical (ATC) classification system.

Each medication listing contains the following information:

- ATC code
- Ingredients
- Code
- Registration number
- Brand name
- Strength
- Presentation
- Form
- Agent
- Manufacturer
- Country of manufacturing
- Responsible Party Name
- Responsible Country Name

The National OTC medicines List welcomes comments from healthcare professionals. Please send comments to: [info@moph.gov.lb](mailto:info@moph.gov.lb).
